Visualize data across your organization with Nintex Analytics

Nintex Analytics provides a robust data infrastructure to support reporting on workflows and forms across your entire Nintex deployment. You will gain visibility into vital inventory and usage date such as workflow billing, the total number of deployed workflows, form submission count, top workflow publishers, and more.

Built using state-of-the-art data technology

Azure Data Bricks and Data Lake technology ensures the highest possible performance leading to an excellent user experience, allowing you to gain key insights into how your workflows and forms are being used.

Data accuracy

Actionable business process analytics allow you to make critical decisions based on detailed data to drive optimization and return on your Nintex investment.

Simple and easy to use

Pre-built dashboards allow you to visualize data across your organization efficiently. Single-sign-on through Nintex Workflow Cloud means it's easier than ever before to access your critical workflow data.

# Help drive optimization with actionable data insights

The next generation of Nintex Analytics gives IT, operations, business analysts, and process professionals easy access to powerful dashboards and pre-defined reports that provide actionable insights to help drive optimization and return on investment.

New deep dive pages

New data widgets provide a view into your workflows, such as workflow type (Production vs. Non-production), platform deployment, workflow location, etc.

Analyze individual workflows

Gain topline insights into workflow performance and trends. See how many times a workflow has started, completed, errored, and more.
