Eliminate the Document Chaos

quorum software

Dynamic Docs

Dynamic Docs is a cloud-based document management system that was specifically built to make oil and gas operators more secure, agile, and compliant. The "smart search technology" provides a centralized asset database so your company can quickly and easily find all types of land and well files.

Find and Analyze your Documents with Ease

◇ Instantly find documents by searching keywords, phrases, and data attributes from any device.

◇ Use the intuitive map search to get the big operational picture, then drill down to find assets of interest.

◇ Access interactive analytics to analyze key metrics related to assets across regions, departments, and data types.

Features
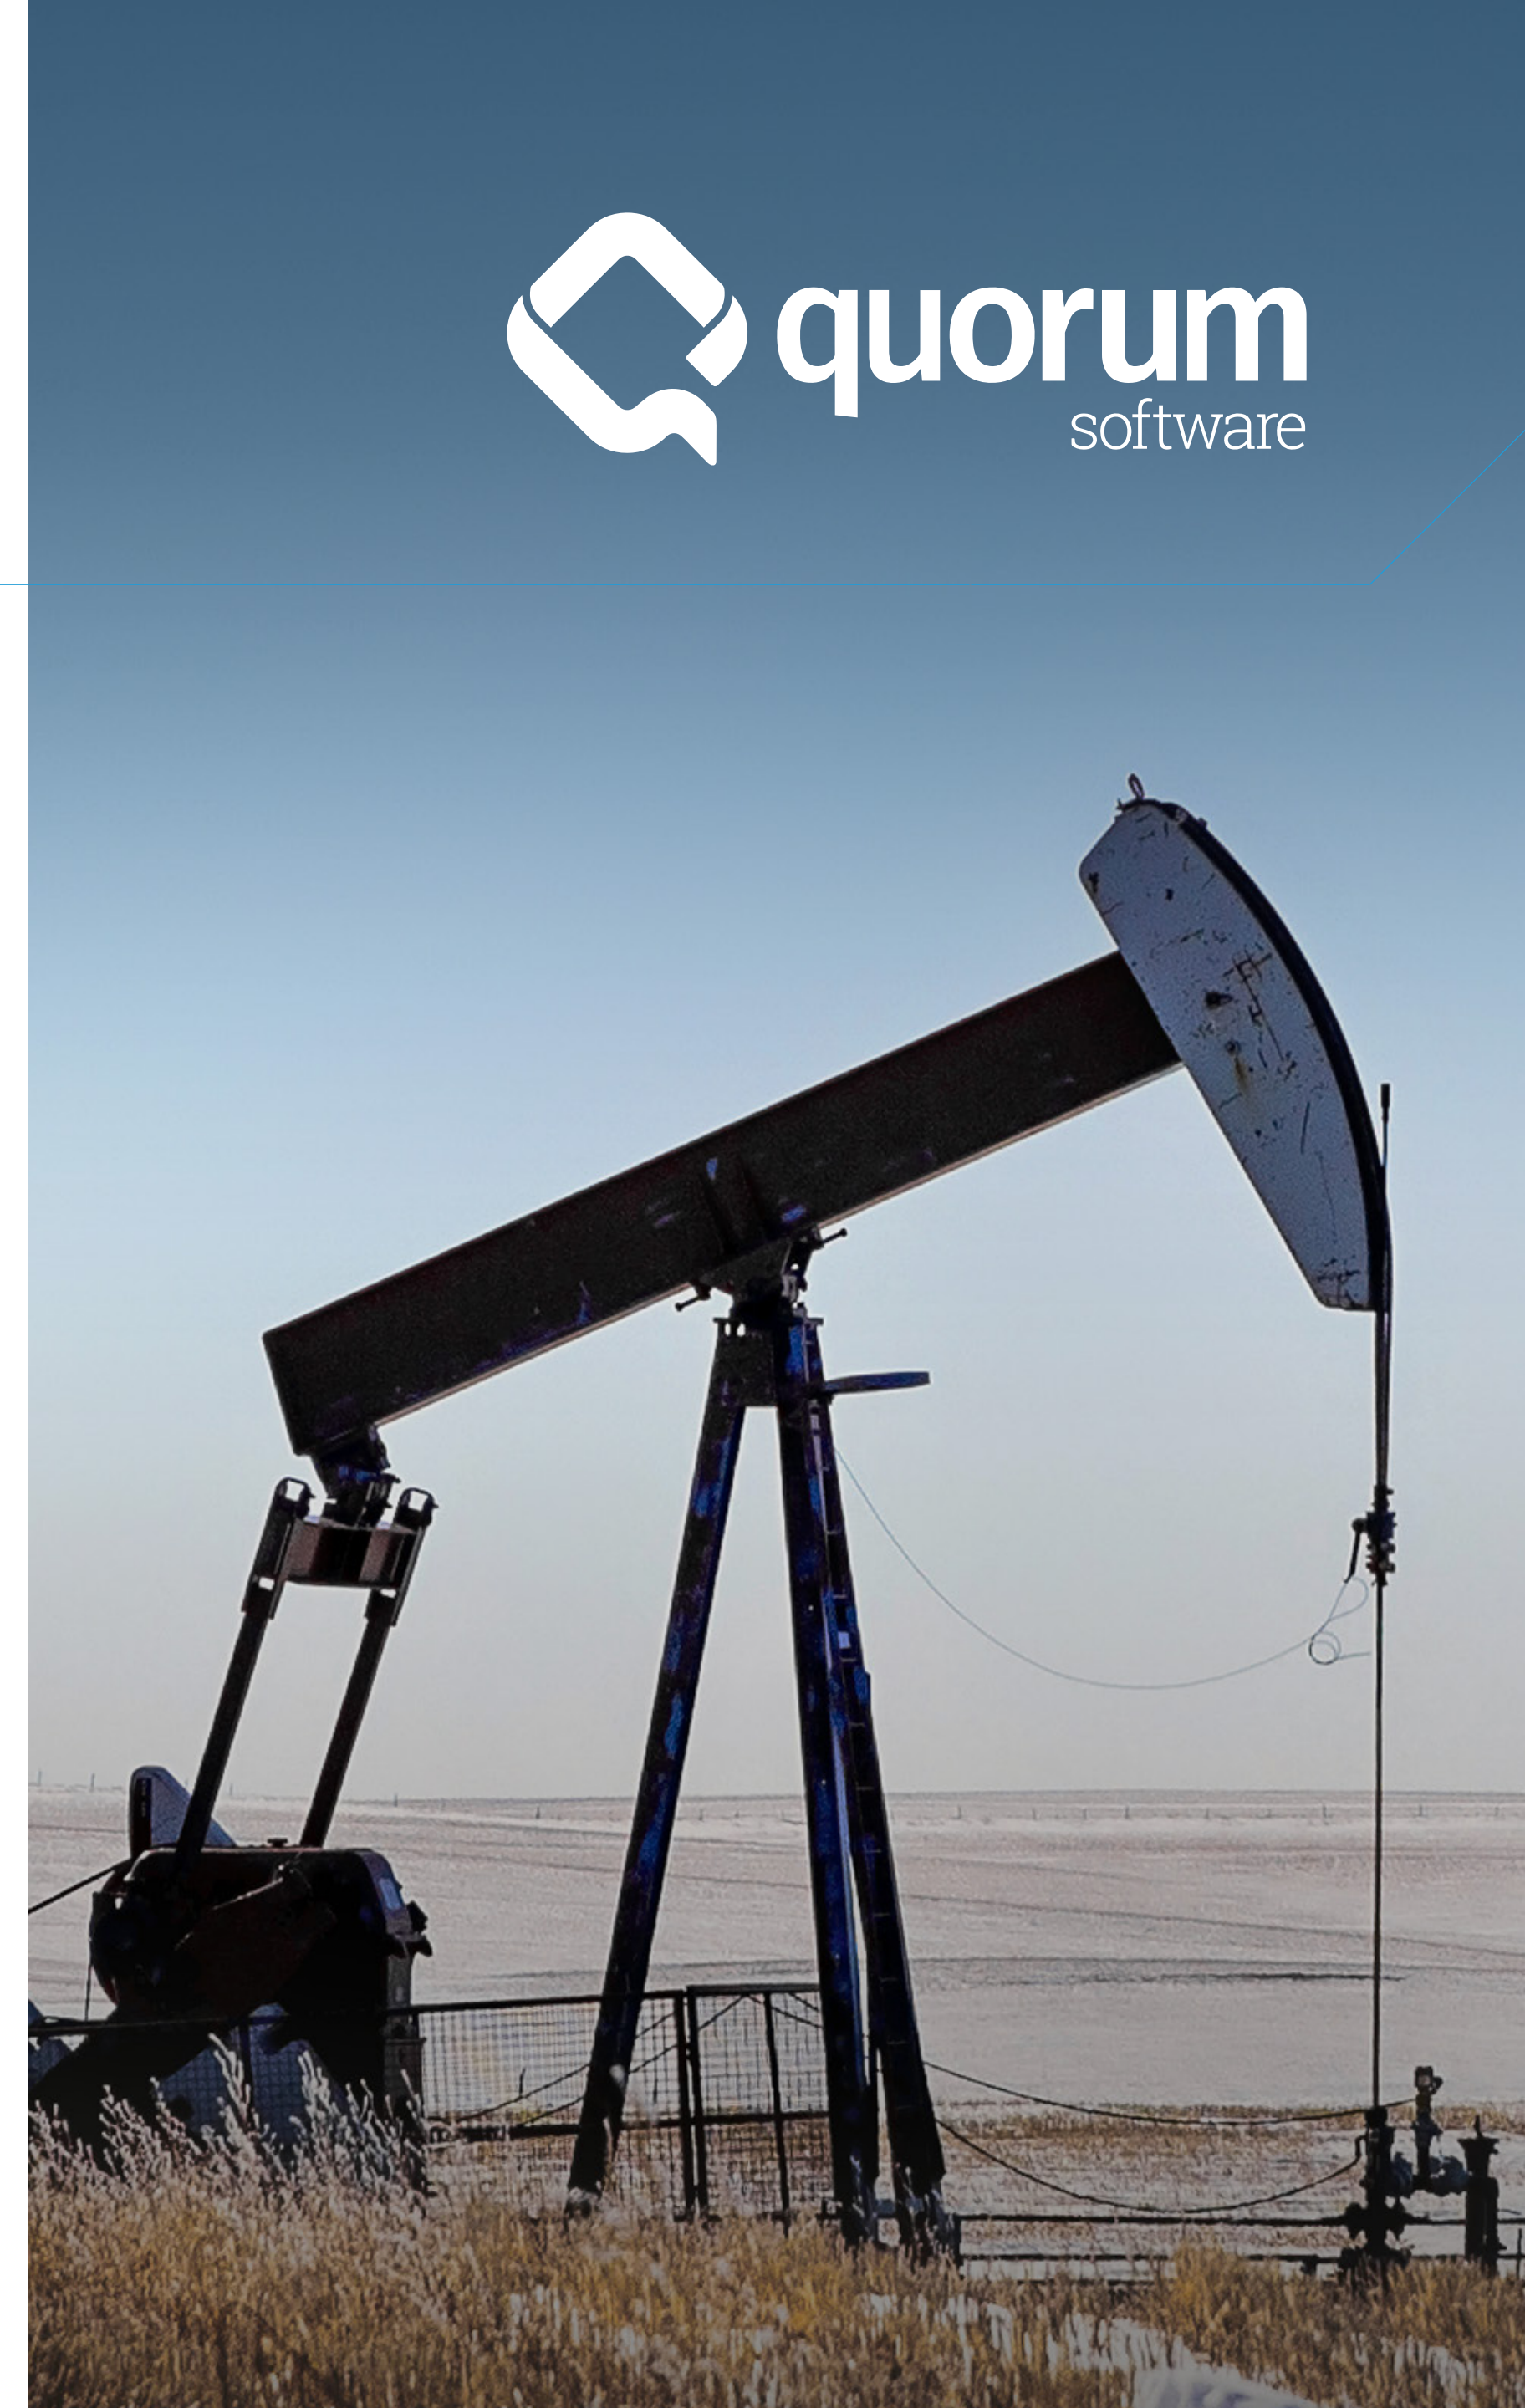

Smart Search Technology

Locate information quickly and accurately by narrowing search results based on attributes, document tags or key phrases. Customize search experience based on user roles.

Quorum Product Integrations

Integrations with various Quorum accounting, Land and Well Operations provides a rich set of cloud-based document management capabilities for users of these systems.

Advanced Security

Multiple security and authentication levels keep your sensitive information safe. Provide right level of access to the right users with configurable role-based permissions.

Virtual Data Room

Share documents and information with internal and external parties without having to make redundant copies. Leverage our advanced security capabilities to control user access.

Saved Searches

Save search criteria and re-run at any time to retrieve the most up-to-date search results. Utilize your saved searches to rapidly build collections of documents needed for a project.

Structured Taxonomy

Be up and running quickly with rapid implementations using out-of-the-box industry proven taxonomies designed to support our smart search capabilities.

Audit History

Improve visibility across the system. Easily track the lifecycle of a document to see what changes were made, when and by whom.

Quick File

Easily upload and OCR all files and metadata from an acquisition to quickly provide a searchable document repository for users.

Document Version Management

Save multiple versions of the same document. Set any version to the current version viewable within the preview window.

Benefits

Simplify Document Storage

Through integration across multiple Quorum products and advanced security, Dynamic Docs serves as a holistic document repository to meet the needs of various departments and users.

Streamline A&D Processes

Onboard new asset information 30-60% faster with fully searchable data. Quickly integrate unstructured information received during acquisitions, and when assets are ready for sale. Easily group documents based on search criteria to facilitate divestitures.

Minimize Data Entry Time

Automate accounts payable input using our AI engine to extract key data from invoices and automatically enter On Demand Accounting AP Workflow.

Improve Collaboration

Keep documents organized and accessible to the right users at the right times. Share documents and information with third parties for A&D, owner relations, and joint ventures while reducing risk and decreasing file duplication.

Accurate Document Integration

Dynamic Docs uses business logic to identify keywords from files to label, organize, and integrate files. Capture documents and related metadata across departments and gain a competitive edge.

" Dynamic Docs allows us to accurately integrate well information so data is literally at our fingertips and actionable across the company. Because of this, we now have a competitive advantage on speed of accessing and analyzing our well information. "

- Matt Gallagher
COO of Parsley Energy

dynamic docs

Improve collaboration and organization with access to all your land, accounting, and well files.

quorum software

Quorum Software powers growth and profitability for energy businesses by connecting people, workflows, and systems with decision-ready data.
