Take Your Business Workflows to the Next Level

execute

Execute Advanced Workflows

Execute Advanced Workflows is a value-add option for any module within the Execute platform. Driven by the need to simplify and manage complex business workflows, Advanced Workflows were created to increase visibility into process ensuring that every task gets completed on time, minimize errors and greatly reduce the complexity of any business process.

Main Features of Execute Advanced Workflows
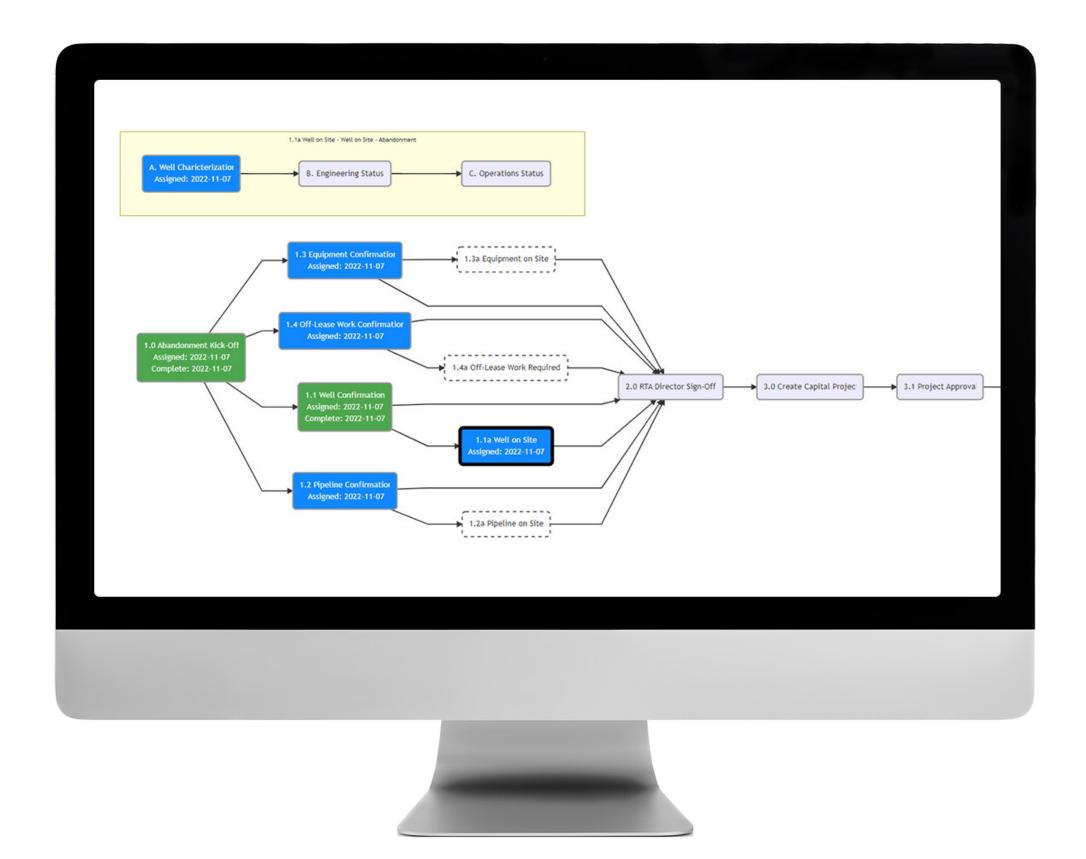

Streamline Process

Configurable Business Rules define when workflows are initiated, when tasks are assigned, whom they are assigned to, and when they are completed. The result is a streamlined process configured to your company's business process that ensures the right person captures the right data at the right time while significantly reducing the effort required to manage the process.

Support Sub-workflows and Parallel Tasks

The tasks in an Advanced Workflow can be run sequentially, in parallel, or skipped entirely. The result is a full representation of the detailed workflows oftentimes represented in a Visio diagram. Greatly reducing onboarding of new staff and reducing change management timeframes by guiding users through complex workflows and sub-workflows as they evolve.

quorum software

Control is in your Hands

Speaking of evolving workflows; workflows are defined and managed by your team within Execute. As your business changes, your administrator can easily update the rules to evolve with your organization ensuring you don't get stuck with an inefficient workflow that no longer works the way you want to.

Detailed Reporting and Custom Notifications

Keep key stakeholders up-to-date on the status of tasks with custom notifications.

Your administrators can build custom email notifications to keep everyone in the loop and provide real-time alerts on updates to tasks no matter your role in the workflow. Customize what triggers an alert, who receives it, and what information is included, saving you and your company valuable time on reporting and having to chase data.

Gain insight into your workflow processes with comprehensive reporting that tracks when tasks start, end, their status and who is currently assigned to the task.

Execute Platform

Execute Advanced Workflows can be leveraged in any Module within the Execute platform. Customers today are greatly simplifying their processes in the following areas:

- Well Readiness (Well Delivery Module)
  - Ready to drill
  - Ready to abandon
  - Ready to complete
  - Ready to suspend
  - Workovers

- AFE Process Management (AFE Module)

- FEL Stage Gate Processes (Capital Budgeting Module)

- Decision Making Tool – Tracking Discussion & Change Management
