# On Demand Data Hub Overview
Put Your Data to Work

Information is your most critical asset. It informs decisions, measures successes and failures, and makes your company run. On Demand Data Hub is the solution to your data challenges.

Modern Data Solutions

Data Hub enables you to get more value from your existing investments in analytics software such as Power BI, Spotfire, Tableau, Excel and more. First, our data experts simplify, clean, and enhance Quorum's On Demand application data to ensure that it is user-friendly and reporting-ready. Then, you can access the data on demand in the reporting, analytics, and data tools of your choice.

Current Data Challenges

- Access is difficult, inconsistent, and requires technical resources.

- Business users want to use the reporting, analytics, and data tools that they already know.

- Analysts have to perform data pulls and build reports, which delays decision making.

On Demand Data Hub makes it easy and cost effective to put data at the center of everything you do.

Data Your Way. Right Away.

Quorum's On Demand Data Hub provides secure access to easy-to-use, accurate Quorum data for business users and analysts to build reports and analysis in the tool of their choice.

Streamline Data Access

Everyone needs access to data. With the On Demand Data Hub, you don't have to be a data scientist to understand and gain value from Quorum data.

Use the Tool of Your Choice

Reporting, analytics, and data tools are only as good as the data they receive; when connected to the On Demand Data Hub, any tool can help create trustable insights from quality data.

Enhance Your Data

Quorum's On Demand Data Hub enhances your data by simplifying it, making it more usable, and formatting it so you can build reports or blend it with other data more quickly and easily, reducing the effort required to get an accurate view of the whole picture.

Extend Value from Existing Investments

Ignite innovation by empowering business users with data that is easy to use and understand. Extend Quorum's On Demand Suite of applications with the Data Hub and/or low-code apps built for end users or specific projects using Microsoft PowerApps, Google App Maker, and Salesforce App Cloud.

Build a Data Ecosystem

No other solution provider in the energy industry is creating as broad a customer and partner ecosystem to accelerate software innovation and value creation. We drive the market forward with an open and collaborative approach, allowing customers to leverage Quorum's On Demand data anytime, anywhere, and with any tool.

The data available in the Quorum's On Demand Data Hub is based on common industry practices and reports, guidance from subject matter experts, and interactions with customers and market participants. The Quorum On Demand Data Hub continues to grow, and more data becomes available, with input from customers, partners, and other industry resources.

Anywhere, Anytime Data Analysis

"After learning about the On Demand Data Hub solution, we just felt comfortable going with Quorum from a technical and innovation standpoint"

Description

On Demand Data Hub is data warehouse in the cloud. Using a secure connection to your Quorum On Demand application data from the BI tool of your choice. Now you can quickly and easily edit and analyze data the way you want without logging into your Quorum application.

Key Takeaways

- Less IT resources or manual steps needed to get value from your data.

- Data is pre-formatted for reporting and ready for analysis.

- Reduce the need to log in to a specific application with anytime access to your data.

Frequently Asked Questions

What problem does it solve?

Being limited by data provided in-app forces you to manually collect data from each software application. On Demand Data Hub skips that step by allowing you to connect securely and pull down your application data into any BI tool of your choice instantaneously.
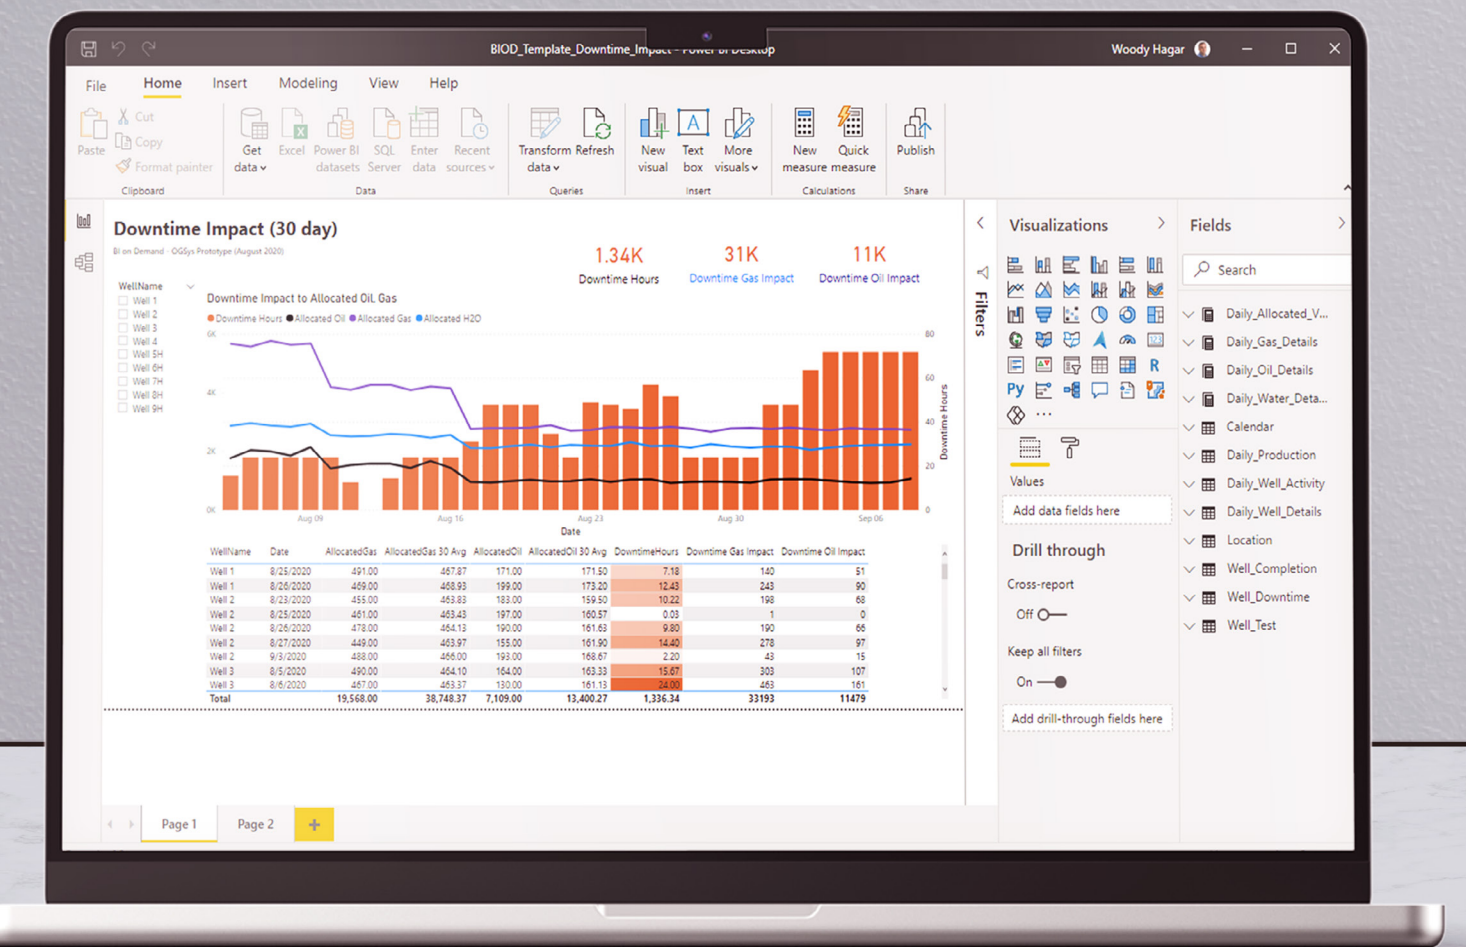

How does it work?

It provides a raw structured data model for any BI tool so you can quickly pull in your data and begin analysis. Data is refreshed daily from the On Demand Suite of applications.

How is this different from Power BI?

On Demand Data Hub is a secure connection to your data so you can pull it into a BI tool (like Power BI, Spotfire, etc.) for analysis and further manipulation. On Demand Data Hub is not an application or tool; it's a data warehouse in the cloud that provides a secure connection to your application data.

How many connections can you have at once?

You are not limited to any set amount, and we do not throttle access, so you can use as many as you need.

On Demand Data Hub is compatible with any BI tool like Power BI, Spotfire, etc. as shown in the image.
