

SemCAMS Midstream Upgrades AFE Process

The Client

SemCAMS Midstream ULC (acquired by Energy Transfer Canada ULC), is one of the largest licensed gas processors in the Western Canadian Sedimentary Basin, owning and operating four gas processing plants in the area.

The Challenge

SemCAMS managed their AFE process using outdated Excel spreadsheets, filled with custom tables and worksheets. This manual process was becoming a hindrance as the organization grew, resulting in too many moving pieces with too many people involved in the handling of AFEs. Tasks were more cumbersome to complete. Finding out where an AFE was in the workflow process required going throughout the building to find out who had the physical copy sitting on their desk.

The Solution

As their needs evolved, it became clear they needed an evergreen technology that would keep their data up to date and connect their teams. They needed a system that eliminated manual work and provided accurate AFEs.

The Result

By implementing Execute by Quorum Software, SemCAMS was able to:

- ◊ Increased Efficiency - The AFE process is significantly streamlined automation.
- ◊ Increased Tracking - Greater visibility into the status of an AFE, where it's at in the approval tree, has resulted in a more effective, time-efficient process.
- ◊ Customized AFE solution – Software easily integrated with SemCAMS workflow. This addressed their challenges and automated their workflows.

“The response to Quorum’s Execute platform at SemCAMS has been very positive. Since implementing it last year, we’ve seen fewer errors caused by manual use and are very happy with its ease of use. The peace of mind I get from being able to trace where an AFE is at is immeasurable.”

- Jane Baker, Joint Interest Analyst, SemCAMS ULC

execute

Unify your capital management and well delivery planning in a single platform that integrates budgeting, capital forecasting, capital tracking, AFE management, operational scheduling, well data lifecycle management, and readiness workflows.

Quorum Software powers growth and profitability for energy businesses by connecting people, workflows, and systems with decision-ready data.
