Challenge

During a critical period of acquisitions and audits, Saturn Oil and Gas Inc. faced significant challenges in ensuring data accuracy and accessibility. Engineers and senior management needed reliable data to make informed decisions that would support their strategic initiatives around sustainable and exponential growth.

Solution

With the right tools in place, Saturn Oil and Gas Inc. transformed their business from 200 BOE/D to over 40,000 BOE/D over a seven-year period. Critical to that growth strategy was the early adoption of Val Nav in 2017. Accurate production forecasting, robust reserves management, and rapid A&D analysis were essential tools for Saturn's continued success. The further implementation of Quorum's Execute suite centralized their operations, effectively replacing spreadsheets for tracking well inventory, drill progress, land statuses, acquisitions, and managing AFEs. This transition reduced their reliance on IT and individual Excel workbooks. Quorum's innovative solutions ensured data accuracy and supported Saturn's rapid expansion and data-driven decision-making.
