Merak 2023.1

Date: 16 August, 2023

Release Updates

The latest version of Merak Planning, Risk and Reserves software has been released with usability, and functionality improvements as follows:

1. Rollup Definition has now been enhanced for easy access to Result Set Definition. A refresh button has been added for a quick refresh of the updates on Result Set variables.
2. Global Parameter documents have been enhanced by adding a Notes feature.
3. Users can now calculate consolidation document with consolidation factors having up to six decimal places.
4. Report documents have been enhanced to give users the flexibility to report Global data and Global Parameter documents as Calculated variables.
5. Users can now modify the case escalation date in a batch document.
6. Users can now easily open linked documents (such as price file and global data document) from the document itself. This applies to Case document, Batch document and Corporate documents.
7. A group of variables within a model document can now be moved together within a particular tab.
8. Support for Oracle client driver 19.0.0.0 has been added, for usewith Oracle 19c and Oracle 21c servers.
9. Search functionality in the Peep Model Visualizer has been enhanced to handle wildcard search.
10. Report design can now be accessed from the Report tab of Batch and Consolidation documents via the context menu.
11. The Merak application is now supported on the Windows 11 Operating System.
12. SDK Methods to export group documents, corporate documents, report documents, and custom indicators have been included.
13. The function 'SetCurrencyUnits' has been added to the SDK which will help users to set the units of currency in Peep.

There have been a few issues resolved for the current release as follows:
1. Model variables in the Capital, Burden and Tax tab cannot be deleted without the user's acceptance of the dependencies warning message.
2. Corporate documents (Price files, Currency files, Global Parameter and Global Data documents) have been fixed to respect the fiscal year settings in the preferences.

3. An enhancement has been made such that the user can open the report design for model-specific reports.
4. Incorrect values were being displaying for calculated and model variables of unit 'E3 Dollar Balance'. This has been fixed to show correct values.
5. Documentation has been added for the 'SetScheduleModel' Method. An example of this method has been included for better understanding.

Get Started

Be among the first to use Merak 2023.1 by downloading the release installer at https://clients.aucerna.com.
