# Merak 2024.1

Date: 10 October, 2024

## Release Updates

The latest version of Merak Planning, Risk and Reserves software has been released with usability, and functionality improvements as follows:

1. Validation check has been added to case, consolidation, batch and scheduler documents on calculation to display error message at the start of calculation, giving the user flexibility to decide whether they want to go ahead with calculation despite those errors. Earlier, errors used to display only at the end of calculation, where user has to wait for the calculation to complete to see the errors. Again, user has the option to uncheck this feature from preferences.

2. Peep SDK-GenerateRollupReport : Automation method to generate rollup report and export it to xlsx file has now been included.

3. Peep SDK-SavePriceDocAs : Automation method to create a copy of the specified price document has now been included.

4. Peep SDK-ImportPexFileEx : Automation method to import a pex file with an option to suppress overwrite warnings has now been included.
