![SLNG - Singapore LNG]

SLNG Enhances Efficiency of LNG Operations with Cloud

Results

Automation
Operational Expense Reduction through automation and billing optimization

Speed
Faster time to market with agile data analysis and decision-making tools

Security
24/7 security with SOC2 compliance

Challenge

With the mandate and responsibility to ensure uninterrupted send-out of natural gas for domestic consumption, SLNG needed a reliable and sustainable system to support business operations. The system needed to be agile and scalable to cope with dynamic business changes and expansions, as well as complex business processes.

Solution

Energy Components (EC) was implemented to streamline terminal operations, enhance the LNG value chain competitiveness and support the overall terminals commercial operations. Quorum's ECaaS on AWS assures SLNG's gas supply. EC's cloud service integrates software and infrastructure under one SLA
