MANAGE YOUR MOBILE WORKFORCE

Visibility of Your Remote Workforce

Know what craftsman are on your worksite, their GPS coordinates, skills, rates, and work schedules in real-time.

Accurate Costs, Every Day

Get accurate hours & costs for each individual contractor working in remote locations.

Automatically Enforce Contracts

All contractor hours & costs are pre-audited and compliant to theTerms & Conditions of their unique contracts.

Contractor Management in the Field

The TRACK Anywhere Kiosk provides badge in/out capability in remote locations where conventional access control or gate systems are not available. The Kiosk mobile application records activity for workers identifying them by their personal RFID tag or QR code. All badge in/out activities include the geo-location of the activity, which is used for validation of worker location at the time of the activity.

The TRACK Anywhere Kiosk consists of a mobile windows application, profile manager, and an administrative console as cloud applications that communicates with the client's TRACK database. The profile manager provides the ability to manage workers as well as the worker's location and company they work for. The Management Console provides administration of the Kiosk groups and user access as well as visibility into the worker activities.

All activities from the mobile application flow into TRACK as labor activity, along with the geo-information for additional detail when allocating time

Track Anywhere Kiosk

Large Remote Workforces

The intrinsically safe, ruggedized Kiosk is designed to handle large volumes of contractors working in remote worksites. The Kiosk can be used as a portable device or can be fixed at a location, giving owners the flexibility to capture worker hours & location wherever the job takes them.

RFID   **QR Code**   **Access Code**

Access Control Functionality

Contractors can easily scan unique RFID or QR codes to badge in/out of remote worksites upon arrival and departure. All activity is sent into TRACK in real-time, giving owners clear visibility of the contractors working on their remote worksites.

Available on Windows and IOS
