

# Ticket Accounting

Streamline Inventory And Payables With  
Efficient Digital Ticket Management

## Ditch Paper, Boost Efficiency

Much of the material delivery and hauling in construction is still backed by paper tickets, but Ticket Accounting digitizes all these tickets into actionable data while AI handles the heavy lifting, freeing your team to focus on real work.

## Inventory Control on Autopilot

When combined with Material Supply (formerly Matieral Inventory), an independent solution that boosts inventory control, Ticket Accounting helps maintain and monitor an up-to-date inventory, order precisely based on your needs, and eliminate the risk of overstocking. Ditch manual spreadsheets and guesswork. With real-time inventory management, you'll see:

- ✓ Active material levels at your plant
- ✓ Deliveries as they happen
- ✓ Precise order recommendations

***Ticket Accounting has helped us find efficiencies that we would not reach with manual processes. Also, we have caught expensive billing errors that saved the company many times what the software costs. I cannot imagine managing hauling and materials without Ticket Accounting.***

\*Material Supply is a separate solution that includes an inventory control aspect.

# Ticket Accounting

## Pay Vendors with Confidence

Boost the speed of checking invoices and making payments to your material and hauling vendors.

**Skip the Paper Chase:** Match invoices to tickets automatically.

**Catch Errors Instantly:** AI highlights missing, duplicate, or already invoiced tickets.

**Focus on Exceptions:** Resolve real issues, not paperwork.

**Seamless Payments:** Send verified data to accounting for fast vendor payouts.

## Spend Smarter

Track daily raw materials and hauling costs effortlessly. Digital tickets and matched invoices translate to transparent spending. Compare, analyze, optimize – take control of your daily expenditures.

## Data Driven Results

Ticket Accounting provides real-time cost insights, automates workflows, and integrates seamlessly with ERP systems and processes. This results in simpler operational workflows and fewer errors.
