Your data center houses the mission-critical computer systems and applications that support and drive your business. Whether you are building a new data center, planning a disaster recovery site, or simply expanding a server room, AFL has the experience and resources to design and implement the physical infrastructure that will support your needs and allow you to easily install new equipment and manage your network.

Because AFL understands trends in technology, we can recommend solutions to accommodate the greatest amount of flexibility for long-term growth. Our solutions address future issues, such as moves, additions, and changes. We ensure that your infrastructure works seamlessly both today and tomorrow.
