

INDUSTRIAL & MANUFACTURING

ENVIRONMENTS

- Manufacturing Production Plants
- Warehouses
- Industrial Facilities
- Geographically Dispersed Commercial Locations
- Hazardous Workplaces
- Public Areas

CAPABILITIES

- Structured Cabling
- Paging and Mass Notification Systems
- Two-way Intercom Service for Door/Entry Control
- Lock-down Systems
- Mass Notification
- Event Logging
- Security and Safety Systems
- surveillance monitoring
- Distributed Antenna Systems (DAS)
- WiFi
- 24/7 Professional Support

The trend across the manufacturing and process industries is clear: Network users expect higher reliability, faster speeds and wireless connectivity. Competitiveness is everything to manufacturers, and much-needed gains in efficiency and profitability will have to be achieved through new process innovations such as the continued automation of robots and warehouse transportation. 5G and IoT will be key to enhancing and enabling these advances in manufacturing.

Whether you need a new network or want to optimize or expand a network that you have, we offer experienced advice to assist you in reaching your productivity, performance, and security goals.

AFL installers and field technicians are trained and equipped to work safely in the most demanding environments requiring lift work, confined spaces, and job sites with hazardous materials and conditions.
