

PROJECT SNAPSHOT

TRANSMISSION COMPRESSION TRAINING & SUPPORT

AFL COMPRESSION SOLUTIONS

AFL offers solutions for all conductor types and operating temperatures including ACSR, AAC, AAAC, ACAR, AWAC, Alumoweld® and Steel Ground Wire, ACCC, ACCR, ACSS and ACSS/TW.

TRAINING SCOPE

Technical support for products and services

Application and product engineers to assist with product selection and specification support

Free services

- Damper, spacer and spacer damper recommendations
- Field support
- 24/7 tech support – 1-800-866-7385

IEEE and ANSI committee work

Over 100 years of conductor and accessories design, testing and manufacturing experience

Onsite training provided worldwide

Compression Series

- Standard Compression Two-Die System
- HiTemp® Compression Two-Die System
- Quick Compress® Single-Die System
- Solo HD® Compression Single-Die System

[AFL Technical Support](#)

AFL has led the development of aluminum conductor accessories for more than 100 years. Continuous research, development and field experience have resulted in the industry's most complete line of compression accessories, including dead ends, jumper terminals, splices, T-taps, repair sleeves and terminal connectors. All compression accessories are designed to operate cooler than the conductor, extending its life. Not only does AFL have several different compression configurations to suit all of your needs, we also provide training and support.

"With the introduction of the SOLO HD full tension compression system, AFL has engineered-out potential safety hazards from the compression installation process. The on-site compression training provided by AFL ensures an efficient installation and promotes safety through the project duration," Robert Crumpton, CSP, who participated in a hands-on training of Solo HD from the AFL team.
