Public projects are often subject to a higher level of scrutiny—and face other budget, oversight, and project management challenges—compared to private-sector work. It pays to have an experienced partner in your corner. Our work on major infrastructure contract projects—along with ongoing service and maintenance relationships—positions AFL to confidently manage projects at all levels of state, county and municipal authority.

Our solutions include powerful management platforms to fully integrate campus-wide equipment functionality, daily operations, troubleshooting and maintenance tasks. Firmly established as fiber optic specialists, this expertise remains at the heart of our service offering to clients. The key to our success is a fundamental understanding of the building blocks of technology, and their relationship to your real mission.
