RELTIO SECURELY ENABLES GROWING GLOBAL TEAM

Reltio

Seamless integration with existing multi-cloud environment plus support for multiple use cases make Appgate SDP a perfect fit for now and the future.

Background

Reltio provides a cloud-native multi-tenant, multi-domain master data management platform in a software as a service model that delivers real-time data at scale. With a global presence and growing team, Reltio adheres to a cloud-first strategy, leveraging technology to create efficiency and preserve agility while meeting strict security and compliance requirements.

Challenges and Requirements

To enable a global workforce that leverages distributed workloads—especially in Amazon Web Services (AWS)— Reltio needed a Zero Trust Network Access (ZTNA) alternative to restrictive and vulnerable VPNs. It wanted a solution that:

- Keeps pace with the dynamic development environment
- Is easy to install and use, needing minimal administration
- Unifies policy framework for multi-cloud IT environment
- Integrates with existing identity access management (IAM) infrastructure
- Provides seamless multi-factor authentication (MFA) for production environment access

"IT people are understandably leery of new tools and bold claims, but the truth is that Appgate SDP just works. The security, transparency and scalability are exactly what we need to help our engineers go faster—as we grow, this solution's efficiency will provide exponential time savings."

-Leslie Devlin, CISSP, Senior Security Manager, Reltio

Solution

Reltio recognized that Appgate SDP, an industry- leading ZTNA solution, addresses its needs. To enable secure, identity-centric access, Appgate SDP integrates with Reltio's IAM service, which fetches up-to-date access privileges from the HR system. Combined with the capability to pull IP lists from AWS, the solution:

- Easily accommodates different policies for different teams and users
- Scales seamlessly, dynamically and automatically
- Makes IT environment invisible— limiting exposed attack surface
- Supports region-specific modifications to accommodate regulatory requirements
- Enables DevOps model, adjusting policies to added or removed instances in near real-time

And, Appgate SDP is incredibly flexible. When Reltio needed a secure, separate route—with its own profile and user base—to enable a HIPAA-compliant cleanroom, it was "able to plan and execute in literally minutes."

INDUSTRY
Technology, software as a service

USE CASES
- Provide secure DevOps access
- Provide secure production access
- Create HIPAA cleanroom

CHALLENGES
- Required secure access into production and dynamic cloud workloads for global DevOps team
- Ability to work with existing multi-cloud IT environment and IAM solution
- Needed region-, team- and user-based control
- Limited administration resources

SOLUTION
Appgate SDP

BENEFITS
- Enhances engineering productivity from dynamic scalability and dramatically reduced onboarding and offboarding
- Improves production environment access security and regulatory compliance through fine-grained and flexible access control
- Minimizes attack surface
- Reduces operational costs due to low maintenance and administration
- Enables additional use cases beyond the initial drivers to enable long-term Zero Trust journey

About Appgate

Appgate is the secure access company. We empower how people work and connect by providing solutions purpose-built on Zero Trust security principles. This people-defined security approach enables fast, simple and secure connections from any device and location to workloads across any IT infrastructure in cloud, on-premises and hybrid environments.
