

Make it easy for users to put your card top of wallet

Q2 CardSwap

Earn interchange for Amazon, Netflix, iTunes*, and more.

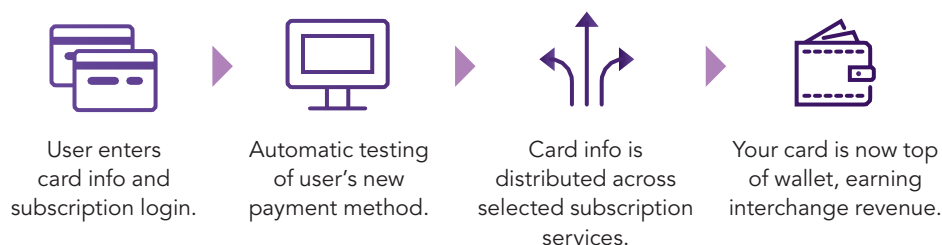

Q2 CardSwap™ allows users to automatically apply new debit or credit card information across their favorite subscription and digital point of sale services in a single, elegant workflow.

Users enter their card info and login credentials for their subscription services, and the new preferred payment information is automatically tested and applied in real time across multiple services.

Once a user completes the process, they've put your card top of wallet for some of their most valued vendors—expanding their engagement with you and positioning you to benefit from valuable interchange revenue.

** None of the listed companies are associated with, sponsor, or endorse CardSwap.*

- **Supports 20+ popular services.** CardSwap's growing network of supported services includes Amazon, Netflix, Hulu, iTunes, Spotify, Pandora, CBS, and more.
- **Implementation is simple.** CardSwap can be implemented standalone or as an additional feature in just weeks.
- **Secure and compliant.** CardSwap is PCI compliant and undergoes regular maintenance and testing to ensure user data is protected.
