# HackerOne Integrations & Automations

Customize your HackerOne Ecosystem

Putting the *Flow* in Workflow

Security teams are under increasing pressure to do more with less. HackerOne's ecosystem of pre-built integrations, flexible APIs, Webhooks, and AI-powered automations is designed to help teams scale their impact. Seamlessly connect HackerOne into existing tools and workflows to streamline vulnerability management, accelerate remediation, and improve cross-team collaboration—all within the tools you already use.

Integrations

Connect the HackerOne Platform with third-party tools and ensure security insights flow effortlessly across your broader tech stack. Security teams can leverage over 30 pre-built integrations—and access to fully customizable APIs and Webhooks—to centralize vulnerability management, ensure data accuracy, and reduce overall gaps in visibility between teams.

With HackerOne integrations, there's no need to worry about complex set up or custom development on your end. We provide the integration framework, you choose how you want your data transferred between the HackerOne Platform and your other tools.

Integration availability varies on customer subscription.

Key Use Cases:

- Vulnerability Management
- Security Workflows
- Software Development Lifecycle Workflows
- Ticket/Project Management
- Collaboration

APIs & Webhooks

For teams that require deeper customization or have unique use cases, HackerOne provides a powerful integration framework through flexible APIs and robust Webhooks. These tools enable security teams to create fully customized, real-time connections between HackerOne and the tools they rely on every day.

- **Open API:** A scalable and structured way to build tailored integrations with virtually any system.

- **Custom Webhooks:** Build your own real-time integrations using event-based triggers in the HackerOne Platform. (Available for Professional and Enterprise customers)

Jira · GitLab · asana · GitHub · servicenow · slack · splunk> · zendesk

Automations

Accelerate workflows and eliminate manual effort with a fully customizable, in-platform automation engine. Jumpstart automation using pre-built templates and advanced AI actions, or build your own intelligent automations that adapt to your unique processes and business needs.

Automation Capabilities

✓ **AI-Powered workflows:** Leverage Hai's AI capabilities to create intelligent, adaptive workflows that effectively solve your business challenges and optimize processes for better results.

✓ **Pre-built template library:** Leverage a robust set of templates for common vulnerability management workflows.

✓ **Customization options:** Modify templates or develop custom automation logic tailored to your needs.

✓ **Scheduled automations:** Run recurring tasks on a set schedule—daily, weekly, or monthly—to complement event-triggered workflows.

✓ **Event-based actions:** Automatically trigger responses to specific events, such as new submissions, status changes, or resolutions.

✓ **Dynamic report routing:** Direct reports to the right teams based on affected assets, product areas, or predefined rules.

✓ **External Connectors:** Build automations for any integration, whether that is for a commercial platform or custom-built, in-house solution.

✓ **HackerOne-hosted secure cloud environment:** Run automations in HackerOne's purpose-built automation cloud—no infrastructure to deploy or manage. Enjoy full API access with zero overhead.
