HackerOne Security Advisory Services

Level Up Your Continuous Application Security Strategy

Leading organizations around the world count on continuous security testing to monitor the health of their security strategy. It's the safety net that automatically deploys when other systems and processes fail. HackerOne identifies continuous improvements across your attack surface revealing blind spots in assets, known and unknown, before attackers exploit them.

HackerOne Security Advisory Service is designed to optimize the outcomes of your continuous security strategies and ensure your security safety net is strong. It is delivered by our Solutions Architects — an elite team of accomplished security professionals with career success establishing security programs at Fortune 500 companies and experience shaping standards. Their security practices including Incident Response, Attack Surface Management, Secure Software Development, and Vulnerability Management can all be strengthened by incorporating program findings into core workflows.
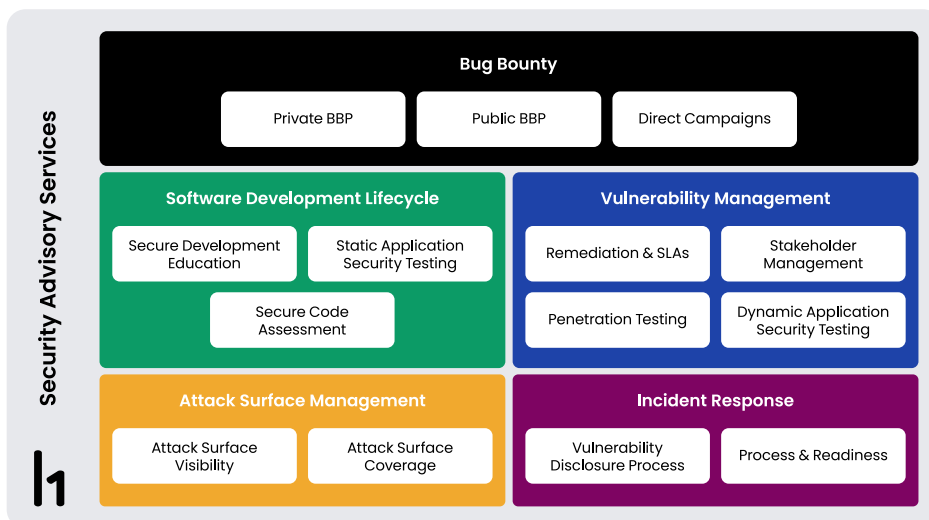

Use Cases

Assured Success

- Expert security advice with proactive guidance and industry best practices

- Methodology backed by 10+ years of successful customer programs

Center of Excellence

- Unified management of continuous security testing

- Service blueprint and repeatable onboarding playbook for efficient operations

Best in Class

- Expert partner to build creative hacker engagement strategies

- Foster a stronger alliance with the hacker community

Figure 1: Security Advisory Services Framework

Security Advisory Services Lifecycle

Our engagement process has evolved to serve a broad portfolio of organizations. We analyze each customer's situation and criteria to determine how to optimize their continuous security testing programs to outsmart the most sophisticated of attackers and gain the maximum benefit — now and in the future.

01

Attack Resistance Review
Your Security Solutions Architect starts the engagement with a baseline attack resistance review of your security. The output of your HackerOne program guides the assessment. Bugs that "slip through" are an excellent wayfinder to identify underlying gaps and limitations in your internal security programs.

02

Prioritization and Initiative Plans
We then work with you and your teams to build a plan of attack and prioritize strategically in line with your business priorities. This is then translated into a set of ready-to-go initiatives.

03

Initiative Adoption & Review
Work directly with your dedicated Security Solutions Architect to make improvements that raise your security posture. In 6 months, a review will measure progress made against the baseline assessment.
