

HackerOne Live Hacking Events

Where expertise meets action.

Unparalleled results delivered in record time.

Live Hacking Events (LHEs) bring together your security team and the world's best security researchers for a high-energy experience focused on uncovering critical vulnerabilities. Over two weeks, hackers rigorously test your chosen assets, whether they're new features, sensitive data, or under-tested areas of scope.

This isn't just a vulnerability test; it's a concentrated effort that delivers extraordinary impact. With over 3,000 hours of focused testing per event and an average of 180 valid vulnerabilities identified, LHEs accelerate the trajectory of your security program and help you take action against the issues that lurk.

Built to Outperform

What sets us apart is the collective synergy of the largest community of security researchers in the world. HackerOne researchers don't just work for you – they work with you.

In 2023, nearly 48% of valid reports submitted during HackerOne LHEs came from researchers working together, proving the power of shared experience, and real-time interaction. This level of engagement is rare for ongoing programs, and the impact is unrivaled.

Trusted By The
World's Leading
Brands

"This event provided us with an invaluable opportunity to collaborate with some of the most talented, ethical hackers from around the world, all working together to help enhance the security of the Zoom platform"

Roy Davis
Bug Bounty Manager, Zoom

Can you see your brand here?

LHEs are designed for organizations with mature security programs and the budget to support fast-paced, high-impact engagements. Companies with bug bounty experience, cross-functional support, and a willingness to engage directly with researchers see the best results.

3x faster

discovery of vulnerabilities compared to ongoing programs

34%

of vulnerabilities found are high or critical severity

\$800k

average bounties awarded per event

Countries represented, bringing the best ideas and fresh perspectives

A Security Surge

HackerOne LHEs are designed and delivered with care and precision for significant impact and a top-notch experience, including:

Positive visibility

Leverage recognition as a cybersecurity leader in the global community, with opportunities for co-marketing and PR.

Tailored Execution:

With personalized scopes, incentives, and activities, enjoy an event customized to meet your productivity goals.

Expert-driven testing

Specialized security researchers dive into under-tested areas, ensuring validated findings that improve your security posture.

Lasting engagement

On average, 15% of researchers remain engaged post-event, providing continuity and further insights into your program.

"Events like H1-213 provide our security teams with the unique opportunity to engage a diverse group of ethical, independent researchers."

Travis Lee
Offensive Security Leader,
Amazon

With a HackerOne Live Hacking Event, you gain unparalleled insights, targeted expertise, and results that redefine what's possible for your security program, all in record time.
