

Medical Intelligence: Quality Intelligence Integration

Improve measure rates, provider performance, and clinical outcomes through intervention of actionable insights—all within the Medical Intelligence platform

What is Quality Intelligence Integration?

Quality Intelligence Integration embeds the HEDIS® measure output from the Quality Intelligence engine into Medical Intelligence, enabling our customers to improve quality scores, health outcomes, and overall provider performance.

Key Benefits

- Report on 400+ HEDIS measures and/or sub-measures, as well as 166 condition-based Cotiviti measures in Medical Intelligence
- Map state, custom, and additional measures as needed
- Refresh your HEDIS measures within Medical Intelligence at the same interval as your Quality Intelligence application

Valuable Features

- Toggle between HEDIS and QRMs for a fuller picture
- Leverage HEDIS measure performance within the Cohort Builder
- Set goals for HEDIS measures in the Executive Dashboard
- Automate gap-in-care reports by provider and provider organizations using the Batch Report Creator

Using HEDIS measures within Medical Intelligence to meet your business needs

Create

Individuals Module

Aggregate members by their HEDIS measure compliance

Uncover

Individual Dashboard and Quality Measures

Uncover individual-level detail related to all applicable HEDIS measure statuses

Customize

Custom Performance Measures

Create a go-to list of HEDIS measures to quickly compare performance

Aggregate

Stratifier and Query Builder

Create and track cohorts based on quality measures that allow you to intervene on the right members at the right time

Track

Executive Dashboard

Customize up to 20 HEDIS measures to include in your population performance review
