

Suspect Analytics

Effectively identify members with potentially undocumented conditions

A strong analytics foundation is key to building successful risk adjustment programs, improving efficiency and results. However, identifying the right priorities can be a challenge.

Cotiviti's Suspect Analytics solution helps identify potentially undocumented conditions, prioritize risk and likelihood of success, and optimize risk adjustment efforts for Medicare Advantage and Affordable Care Act health plans. Our advanced analytical models provide a nuanced data examination that can predict which members have the highest probability of missing or incomplete conditions. We leverage multiple sources of data to identify gaps in documentation and help identify the opportunities to focus on.

Suspect Analytics is powered by proprietary clinical rules and statistical models to aggregate, quickly assess, and integrate large volumes of data and devise recommendations that are tailored to client needs. These rules are applied across a range of data sources including prior risk adjustment history, diagnoses from past medical and drug claims, durable medical equipment usage, and medical procedures to boost our accuracy in predicting suspect conditions and evaluating risk gaps for our clients.

With our expert analysis of complex patterns across multiple data sources, clients gain key insights to prioritize their member's risk and optimize their risk adjustment programs. Based on potential impact, we identify and rank members with the highest probability of having missing or incomplete diagnosis codes. This approach considers different levels of investment for each member based on a proprietary value scoring model, providing a recommended path to reducing gaps.

Key components

- **Suspect conditions:**
Suspect evidence-based undocumented conditions
- **Member stratification:**
Predict and score adjusted risk based on likelihood of chase success
- **Chase recommendations:**
Zero in on target priorities to optimize retrieval and coding programs

Key benefits for clients

- Leverage expert analyses to effectively create a chase list
- Identify and prioritize charts to optimize retrieval efforts
- Reduce inefficiencies and enhance ability to derive value from data

Key Cotiviti differentiators

- >25 years of experience partnering with national and regional health plans
- Commitment to delivering total value, meaningful innovation, and deep expertise
- Dedicated QA teams and processes
